IDENTIFIERS Colorado

ABSTRACT

This basic vocational related skills assessment module in woodworking is one of sixteen modules designed to help teachers assess and identify some of the areas in which special needs students may encounter learning difficulties. The materials in the module allow for informal assessment in three basic areas: academic skills, motor skills, and vocational interest and awareness. The basic skills assessment includes reading skills, listening skills, using a book to locate information, and mathematics. The reading section offers materials written at two different reading levels: the first paragraph is easy (4-8), while the second paragraph is more difficult (9-12). The motor skills are assessed through teacher observation and recording on a matrices skills checklist. The third area, vocational interest and awareness, is assessed through a vocational awareness questionnaire completed by students. (LRA)

DESIGN AND IMPLEMENTATION OF AN ASSESSMENT MODEL FOR STUDENTS ENTERING VOCATIONAL EDUCATION PROGRAMS IN THE STATE OF COLORADO

Each learner should be considered as unique. All students have unique characteristics which are considered by alert teachers in their efforts to foster more effective learning. This is especially true in vocational programs where our opportunities to know each learner are greater than in some other classroom situations.

Douglas Towne
Sydney Wallace

The purpose of this project was to develop materials that could be utilized for informal assessment of students in vocational programs. The materials were then developed into a series of sixteen modules representing the seven service areas of vocational education. These modules will enable teachers to assess and identify some of the areas in which special needs students may encounter learning difficulties.

This project and the resulting modules are based on the assumption that one of the ways that vocational education can provide training "appropriate to the needs and progress of each ... individual," is to assess the needs of each individual. Another assumption is that "modifying" a vocational program may be done in many ways but cannot be done effectively until assessment of student needs has been completed. The modules will provide information that will enable vocational teachers to modify their materials or lessons based on the results of the assessment information.

Information which you obtain from the assessment may be used in the following ways:

grouping of students with similar instructional needs
placement of students in programs
modification of instructional materials
writing goals and objectives for the student
obtaining remedial help
as a model to devise your own materials
writing contracts for behavioral change
giving specific information to supplemental services or support staff for assisstance

Identification of learning problems clarifies the various level of abilities and the learning styles of students. This necessitates individualizing vocational programs and instruction.

The modules include basic academic skill assessment, motor skill assessment, and interest assessment.

The following vocational areas are included in the modules:

1) *Welding*
2) *Sheet Metal*
3) *Agriculture*
4) *Graphic Arts*
5) *Woodworking*
6) *Automotive*
7) *Autobody*
8) *Drafting*
9) *Health Occupations*
10) *World of Work*
11) *Food Preparation*
12) *Child Care*
13) *Distributive Education*
14) *Electricity*
15) *Horticulture*
16) *Business and Office Occupations*

The assessment of student abilities are important for success in the vocational classroom. The basic skills assessment includes Reading Skills, Listening Skills, Using a book to locate information, and Mathematics. The mathematics section covers many of the basic operations and applications of math that is needed in vocational classes.

The reading section offers paragraphs written at two different reading levels; the first paragraph being easy (4-8), the second paragraph more difficult (9-12). Those students who have trouble with both paragraphs will find it difficult to learn through reading.

As a result of the field testing comments, there are two areas which are only included in the module entitled, World of Work. These two areas are "Following Directions" and "Safety Warnings Quiz". They were judged too "easy" for inclusion in all modules. This module was written specifically for students in disadvantaged and handicapped programs.

Materials are color coded for ease of usage and efficiency.

MOTOR SKILLS

MATRICES
SKILLS CHECK LISTS

DIRECTIONS TO THE TEACHER:

* This section is designed to assess capabilities that are not easily quantifiable. Therefore, you will use these as observation instruments.
* More than anything else, these are to be used as diagnostic tools to help establish goals and objectives.
* Using the matrices, observe the student over a period of several weeks in several different situations.
* There are many reasons for poor or below average levels of performance. These may include environmental influences and health, i.e., stress, nutrition, physical limitations. The matrices are merely a guide to reflect how well a student is doing in your area.

DIRECTIONS: Please check the level each student is at according to the following scale.

1. poor
2. below average
3. average
4. good
5. very good
6. n/a

STUDENT MATRIX SKILLS CHECK LIST													
DAILY LIVING COMPETENCIES:													
Can give personal information													
Money concepts													
Transportation abilities													
Job seeking skills													
Completes work													
Understands directional terms													
Understands safety rules													
Demonstrates cooperation with others													
Punctuality													
Attendance													

DIRECTIONS: Please check the level each student is at according to the following scale.

1. poor
2. below average
3. average
4. good
5. very good
6. n/a

STUDENT MATRIX SKILLS CHECK LIST														
PERSONAL CHARACTERISTICS:														
Grooming														
Personal Hygiene														
Physical Tolerance Full Workday														
Peer Relationships														
Self Confident														
Works Well Alone														
Works Well in Group														

DIRECTIONS: Please check the level each student is at according to the following scale.

1. poor
2. below average
3. average
4. good
5. very good
6. n/a

STUDENT	MATRIX SKILLS CHECK LIST												
WORK APTITUDES:													
Follows Written Instructions													
Follows Verbal Instructions													
Follows Demonstration													
Retains Instructions													
Improves with Repetition													
Conceptualizes the Problem													
Follows Multi-stepped Instructions													
Uses good judgement													

DIRECTIONS: Please check the level each student is at according to the following scale.

1. poor
2. below average
3. average
4. good
5. very good

Perform Manipulative Tasks															
Move Around Objects															
Use Large Tools															
Small Motor-eye-hand Coordination															
Two Hand Coordination															
Use Small Tools															
Finger Dexterity															
Steady Work Pace															
Heavy Lifting															

READING SKILLS

DIRECTIONS TO THE TEACHER:

This instrument is designed to assess how well the student understands written materials. The skills are broken into vocabulary, (Question 1-5), main ideas, (Question 6), details or facts, (Question 7), and inference or logical deduction, (Question 8).

1. Have students read each paragraph and then answer the questions on the following page. The students may refer to the original paragraph while completing the questions. (Time: approximately 15 minutes).
2. Collect all sheets.
3. Correct worksheets.

   Vocabulary

   a. For each vocabulary word listed (Questions 1-5), the student should leave a definition or synonym that shows an understanding of the word as it is used in the sentence. Score vocabulary questions as one (1) point each. Five (5) is a perfect score; zero (0) means none are correct.

   Main Idea

   b. In Question Six (6) you will assign a score of 1-5. The score should be based on how completely the student comprehends the paragraph.
      1) little knowledge or comprehension
      2) some grasp of paragraph
      3) fair idea of paragraph's content
      4) good idea of paragraph
      5) description which tells what the whole paragraph is about

   Details

   c. In Question Seven (7) a full score, five (5) points, should be based on whether the student puts down the two important facts.
      1) any one fact in the paragraph
      2) any two facts in the paragraph
      3) one fact that answers the statement well
      4) one fact that answers the statement well and any one that is in the paragraph
      5) Two facts that answer the statement well

Inference

d. In Question Eight (8) you are looking for an understanding that goes beyond what is in the paragraph.

1) any attempt to answer

2) any answer that even addresses the question

3) some idea of an extension of the basic knowledge

4) 5) a good answer which shows an understanding of the implications of the question.

EXAMPLE: A few words which describe what a good title for the paragraph is about would receive a score of four (4).

4. Total the scores (1-8), for each paragraph.

EXAMPLE:

	Paragraph 1		Paragraph 2		TOTAL
Vocabulary	_____	+	_____	=	_____
Main Idea	_____	+	_____	=	_____
Details	_____	+	_____	=	_____
Inference	_____	+	_____	=	_____

5. Enter the score from each area and the total on the class scoring sheet.

6. Paragraph one was chosen for student who have lower reading levels. Paragraph two was chosen for students who read at the high school level.

WOODWORKING
READING SKILLS I

READ THIS PARAGRAPH:

The folding wood rule is INDISPENSABLE. Most carpenters carry a folding rule on their person at all times. A STANDARD size rule is 6 foot long. Some are EQUIPPED with a metal slide that is helpful in making inside measurements. TAPE rules which range in size from 6 to 12 feet are also handy. Long tapes are AVAILABLE in lengths of 50 feet and longer.

ANSWER THE QUESTIONS ON THE NEXT PAGE

Willis H. Wagner , Modern Carpentry, Goodheart-Willcox Company, Inc., 1976.

NAME_____

WOODWORKING

DIRECTIONS TO THE STUDENT:

Please tell what the following words mean as they are used in the previous paragraph.

1. INDISPENSABLE_____

_____

2. STANDARD_____

_____

3. EQUIPPED_____

_____

4. TAPE_____

_____

5. AVAILABLE_____

VOCABULARY_____
(0-5)

6. What is this paragraph about?_____

_____

MAIN IDEA_____
(1-5)

7. What are two kinds of rules?

(1)_____

(2)_____ _____

DETAILS_____
(1-5)

8. Why do you alwyas carry a rule?_____

_____

INFERENCE_____
(1-5)

TOTAL_____

WOODWORKING
READING SKILLS II

READ THIS PARAGRAPH:

There are several ways of applying a finish to a TURNING. A simple method is to apply paste wax to a cloth and hold it on the REVOLVING STOCK so that it is completely covered. Then, in about ten minutes, run the lathe at a slow speed and polish the surface with a dry cloth. A second coat of wax can be applied as needed. To apply a French oil finish, fold a piece of fine cotton or linen cloth into a pad. Then apply about one teaspoon of white shellac to the pad and add several drops of boiled linseed oil. Hold the pad over the work, moving it from one side to the other. Apply even pressure. Add shellac and oil as needed to keep the pad MOIST. Apply several COATS until you get a mirror-like finish.

ANSWER THE QUESTIONS ON THE NEXT PAGE

John L. Feirer, Cabinetmaking and Millwork, John L. Feirer, Charles A. Bennett Co., Inc., 1977.

DIRECTIONS TO STUDENT:
Please tell what the following words mean as they are used in the previous paragraph.

1. TURNING_____

2. REVOLVING_____

3. STOCK_____

4. MOIST_____

5. COATS_____

VOCABULARY_____
(0-5)

6. What is this paragraph about?_____

MAIN IDEA_____
(1-5)

7. Name two ways to apply a finish.
(1)_____
(2)_____

DETAILS_____
(1-5)

8. Why would you apply more than one coat?_____

INFERENCE_____
(1-5)

TOTAL SCORE_____

LISTENING SKILLS

DIRECTIONS TO THE TEACHER:

This test is designed to indicate how well your students use their auditory skills. They will be listening to a passage that is read two times. Then they will fill in the missing words on the answer sheet.

In order to utilize the Listening Skills Unit, the listening skills paragraph needs to be taped or read to the students by you.

Please read the directions on the student sheets to the class. The students may write on their answer sheets at any time during the two readings. The students should be asked to read the test sheet before listening to the tape.

GRADING:

The number correct is the total number of correct words filled in the blanks. Please accept reasonable substitutes for the words. Overlook poor spelling.

WOODWORKING
LISTENING SKILLS

Slope indicates the incline of a roof as a ratio of the vertical rise to the horizontal run. It is properly expressed as X distance in 12. For example: a roof that rises at the rate of 4 in. for each foot of run is designated as having a 4 in 12 slope. A triangular symbol above the roof line in the architectural plans is used to convey this information. The slope of a roof is sometimes called the "cut of the roof."

PARAGRAPH TO BE READ OR TAPED

WOODWORKING
LISTENING SKILLS

ANSWERS

Determining the slope of a roof:

1. Slope is the incline of the roof.
2. It is the ratio of the vertical rise to the horizontal rise.
3. It is expressed as X distance in 12.
4. For example: a roof that rises at the rate of 4 inches for each foot is said to have 4 in 12 slope.
5. A triangular symbol above the roof line in the plans is used to tell you the slope.
6. The slope of the roof is sometimes called the "cut of the roof".

LISTENING SKILLS

DIRECTIONS TO STUDENT:

You will hear a passage read from the book just mentioned. The passage will be read once quickly and then again slowly.
Listen carefully to the passage each time it is read. As you listen to the passage being read fill in the blanks. You will fill in the facts that you hear on your answer sheet.

READ YOUR SHEET THROUGH BEFORE LISTENING TO THE TAPE.

NAME_____

WOODWORKING
LISTENING SKILLS - Student Worksheet

Determining the slope of a roof:

1. Slope is the incline of the_____.
2. It is the ratio of the _____ rise to the _____ rise.
3. It is expressed as X distance in _____.
4. For example: a roof that rises at the rate of 4 inches for each _____ is said to have 4 in 12 _____.
5. A _____ symbol above the _____ line in the plans is used to tell you the slope.
6. The slope of the roof is sometimes called the "_____ of the roof".

PARTS OF A BOOK

DIRECTIONS TO THE TEACHER:

Being able to locate information in a book is an important skill in most vocational areas. This test is designed to indicate the student's information locating ability in using a TABLE OF CONTENTS and an INDEX.

The student will use a table of contents and an index from your vocational area to answer five questions for each of the two areas. CAUTION students that the Table of Contents and/or Index may have more than one page. Ask students to check all pages before writing down their answers.

SCORING:

Correct the two parts and enter the total score on the class-scoring sheet.

Example:

Score - Table of Contents . . . . . _____

Score - Index . . . . . + _____

(0-10) _____

WOODWORKING
PARTS OF A BOOK

ANSWERS:

Table of Contents

1. Page(s) 517
2. Page(s) 412
3. Page(s) 441 or 442
4. Page(s) 395
5. Page(s) 484

Index

1. Page(s) 90
2. Page(s) 32-33
3. Page(s) 148
4. Page(s) 35
5. Page(s) 33

PARTS OF A BOOK

DIRECTIONS TO THE STUDENT:

There will be two parts to this section.

Using a Table of Contents
Using an Index

*Answer the Table of Contents questions by using the Table of Contents that follows.

*Answer the Index questions by using the Index that follows.

NAME_____

WOODWORKING
PARTS OF A BOOK

TABLE OF CONTENTS:

Using the table of contents answer the following questions.

On which page(s) would you look for:

1. Kinds of joints?	1. page(s)_____
2. Drilling and boring machines?	2. page(s)_____
3. Sanding machines?	3. page(s)_____
4. Portable router?	4. page(s)_____
5. Finishing on the wood lathe?	5. page(s)_____

Table of Contents:

Cutters, 385; Adjusting the Shaper, Methods of Shaping, 386; Shaping on the Radial-Arm Saw, 391; Shaping on the Drill Press, 393.

33. Routers 394
Portable Router, Router, 395; Common Shapes of Router Bits, 397; Controlling the Cutting, 398; Floor-Type Router, 408; Routing on the Radial-Arm Saw, 411.

MATHEMATICS TEST

DIRECTIONS TO THE TEACHER:

This test is designed to assess skill areas that might be needed in a vocational class.

The skills cross vocational areas.

The first ten questions comprise a basic skills assessment. The rest of the test uses various kinds of skills in diverse mathematical areas.

A student should not spend too much time on any one problem. He/she should be given extra time if necessary.

1. Allow one hour for students to complete this test.
2. Score the answers on the students' test.
3. Subtract the number missed from forty-two (42).
4. Enter the score on the class scoring sheet.

It is easy to tell which areas a student is weak in by referring to the test itself.

This is important when there are only a few wrong.

Answer Key

1a. 13
